Profession

ACAC Certified Indoor Environmental Consultant (CIEC)
Registered Professional Engineer British Columbia
Past President NWT Assn of Professional Engineers
Past Director Canadian Council of Professional Engineers

Healthy Homes indoor air quality (HHIAQ) has been conducting IAQ investigations and material and air sampling and consulting certification services since 2000 in Central British Columbia. In that time, clients have been satisfied with prompt, accurate, and pertinent IAQ information. Craig Hostland is a Professional Engineer who has conducted over 4,000 home and commercial building and IAQ related inspections/ assessment/ testing in the Okanagan since 1998. HHIAQ has been recertifying homes affected by marijuana grow ops/ drug manufacture and consumption since before the raft of bylaws were instituted in 2005 and later at HHIAQ prompting.

Previously Mr. Hostland was the NWT's technical representative for the R2000 housing program in the mid-1980's and conducted over 200 technical evaluations in that time. Since the late 1980's Mr. Hostland was a Principal and Senior Project Manager in an acclaimed international architectural/ Engineering firm that delivered several thousand commercial, industrial, and housing units to the Russian and Canadian sub and high Arctic. During that time, Mr. Hostland developed a passion for investigating, identifying, and resolving IAQ related issues in the constructed buildings situated in these extreme Arctic environments. In central BC, Mr. Hostland found through his residential and commercial investigations similar issues, although less extreme, but just as serious and began to develop a protocol that would prudently identify those issues for resolution.

Healthy Homes IAQ was trade marked in 2003 and has North American wide patent pending technology to identify and provide solutions to IAQ issues in response to client based residential and commercial indoor air quality needs.

Healthy Homes IAQ works with several accredited laboratories for product sampling and developing testing regimens for specific project needs. Craig is joined by professionals that include Certified Industrial Hygienists.
