

DEADLY TOXIN INFO

Lead based paint
Radon
Mould
Asbestos

A very timely news item showed up on our local news last night regarding hidden toxins in the home. In the section about mold the "expert" they selected to discuss mold is a mold inspector not a physician but he actually stood there on the news and said "Mold can cause upper respiratory problems, infections of lungs, seizures, and even brain damage." And then they showed him running a spore trap test in poor form. From what I can tell news media does not filter or qualify their experts.

This is the type of hype that gets the phone ringing but also gives the industry a bad name. You can see the piece here:
